Alumni Program
Dear Students,

Germany is home to the largest energy sector in Europe and is considered a forerunner in renewable energy deployment. Where else would you study energy law but in Germany’s capital? We warmly welcome you to our TU master program, where experts from academia and practice will share the latest insights in the field of energy law and prepare you for leading positions in the energy industry, law firms and regulatory authorities. We wish you an inspiring and rewarding time with students from all over the world in Berlin’s cosmopolitan flair.

The master program is taught over a period of two semesters. The first semester introduces to the structure and methodology of European and International Energy Law, provides a general introduction to the economics and general foundations of regulatory law, explores the fundamental principles of infrastructure regulation and the legal framework for electricity generation – the first stage of the electricity value chain; the second semester deals with the legal framework of the construction and operation of electricity and gas grids in Europe; addresses energy wholesale trading and looks closer at the final stage of the value chain: electricity and gas supply. The master thesis, due in the second semester, concludes the program. All semesters include lectures and tutorials as well as company visits, online materials related to practice and extracurricular activities.
Outline

Location and Times
Unless otherwise announced, lectures, tutorials, consultancy and peer group meetings take place at House 9, EUREF-Campus, 10829 Berlin, EUREF-Campus, Room S5 / at the TUB Main Campus, Main Building H, Room 3010. The time is CET.

Semesters
- **First semester** (Winter semester - WiSe 2020/21)
  First lesson on Thursday, 5 November 2020
  Last lesson on Thursday, 18 March 2021

- **Second semester** (Summer semester – SoSe 2021)
  First lesson on Thursday, 15 April 2021
  Last lesson on Friday, 4 June 2021

Lectures
Lectures are held by professors and academic staff of TU Berlin and other universities, by professionals of the energy industry as well as experts from the European Commission, national public authorities and law firms.
Group work is frequent. Homework may be assigned. Lectures start *sin tempore*, i.e. sharp.

9.30 – 12.45
13.45 – 17.00

Company Visits/ Tutorials

<table>
<thead>
<tr>
<th>Tutorials</th>
<th>Company Visits</th>
</tr>
</thead>
<tbody>
<tr>
<td>12:00 – 16:00</td>
<td>Day Trip</td>
</tr>
</tbody>
</table>

Tutorials are mostly held by the academic coordinators. Of a generally more interactive nature, they repeat lecture material, supply supportive information, offer additional training, and help prepare for lectures and exams.

Company visits and excursions are sometimes scheduled on Wednesdays. Company visits give the opportunity to go and see the company on-site and see course-content more lively presented. Registration before attendance may be required.
German Classes
Language classes are offered on campus and incur a small additional fee. Advanced language classes are available, for which taking a test is mandatory. For more information, visit the website of Sprach- und Kulturbörse here.

E-Learning Platform ‘Moodle’ and WirelessLAN
The Information System for Instructors and Students (ISIS)/Moodle is a software for online learning platforms for announcements, distribution of material, registration to events, etc. An introduction will be given in the first week. Please log on frequently, even in lecture free times. The TU Berlin offers WirelessLAN (WLAN) with full coverage across its campus. Students have the possibility to access the internet from any point on the campus.

Exams
A written (e-) exam or paper concludes each module. Everything that was taught in the lectures, tutorials, and within the module may be subject to examination. Exams start on time! A failed examination may be repeated twice. For further details, please refer to the official Study and Examination Regulation. Attendance is obligatory.

Module 01 Legal Framework for the Functioning of Energy Markets (9 ECTS)

Aims and Scope

This module introduces to the structure and methodology of European and International Energy Law. Students are provided with the necessary understanding of the European and international dimension of energy law and learn about the fundamental principles that influence the development and application of energy law in Europe. Students become acquainted with the EU’s Single Market and study the important role of fundamental freedoms as a prerequisite for a well-functioning European energy market. Furthermore, they learn about the development of European energy law as a sector-specific application of regulatory and competition law. For this purpose, students explore the theoretical concepts of EU competition and state aid law and apply their knowledge to cases.

Module 02 Economic Fundamentals of Regulatory Law (6 ECTS)

Aims and Scope
The module provides a general introduction to economics and the theoretical foundations of regulatory law, which is specifically tailored to the needs of energy law students. They learn about fundamental concepts such as the theory of natural monopolies and are provided with the necessary knowledge to understand how the energy sector works. Special emphasis is given to recent developments such as Germany’s ‘Energiewende’. This way, students learn to analyze energy law provisions in an economic context.

Keywords
Economic foundations, regulatory regimes, grid economy, public utilities, access regulation, tariff regulation, price regulation, rate of return, price cap, incentive regulation, deregulation, system operation, balancing.

Examination (6 ECTS, graded)
Written exam, 90 minutes, graded

Module 03 Regulatory Law (6 ECTS)

Aims and Scope
By comparing the law of the EU and its Member States with the law of other countries with close ties to the European energy markets such as Norway, Switzerland and Russia, this module explores the fundamental principles of infrastructure and network regulation. Students learn about the commonalities of competition law and the law of public utilities and study the structure and core concepts of energy infrastructure regulation like third-party access, regulation of grid charges, and unbundling in depth.

Keywords
Liberalisation, privatisation, regulation, regulatory law, network industries, third energy package, natural monopolies, TPA, ex-post and ex-ante control, essential facilities doctrine, regulatory authorities, unbundling regimes, ownership unbundling, ISO, ITO, comparative regulatory law, Swiss energy law, Norwegian energy law, Russian energy law, US energy law, UK energy law, Chinese energy law.

Examination (9 ECTS, graded)
Paper, 10 pages, graded

Module 04 Technical Fundamentals and Related Legal Provisions for Electricity Generation (6 ECTS)

Aims and Scope
The module focuses on the legal framework for electricity generation – the first stage of the electricity value chain. It starts with an introduction to the technical and economic background of electricity generation, acquainting students with technologies like renewable energy, combined heat and power and carbon capture and storage. Students learn about planning and permitting procedures as well as environmental and climate law issues. Furthermore, they explore the EU and international law foundations of emissions trading and familiarize themselves with support schemes for electricity generation from renewable energy in Germany and other European countries.

Keywords
EU renewable energy law, climate change, Paris Agreement, combined-heat-and power production plants, promotion of renewables, grid-related instruments, financial instruments, emission trading systems (ETS), product liability law, authorization procedure, environmental law.

Examination (6 ECTS, graded)
Written exam, 90 minutes, graded

2. Anne Held et. al., *Design features of support schemes for renewable electricity*, (2014) Ecofys
Module 05 Legal Framework for Transmission and Distribution Networks (TSO & DSO) (6 ECTS)

Aims and Scope
The module deals with the legal framework that applies to the construction and operation of electricity and gas grids in Europe. Students explore the liberalization of energy markets since the 1990s and study its main ideas. Grid access, regulation of grid charges and grid connection regimes for offshore wind farms are explored in detail, for example in case studies. Furthermore, the module introduces students to the recent debate on network development and familiarizes them with its legal challenges. Students also learn about the importance of network security and the legal obligations of system operators (TSO and DSO) in this regard.

Keywords
Technical and operational requirements for networks, grid regulation, infrastructure regulation, network development, market integration, market coupling, offshore wind regulation.

Examination (6 ECTS, pass/fail)
Oral Exam (Moot Court)

Module 06 Legal Framework for Energy Trading and Supply (9 ECTS)

Aims and Scope
The module addresses energy wholesale trading and introduces students to the final stage of the value chain: electricity and gas supply. In view of the growing digitalization of energy markets, students will also become familiar with the latest developments on blockchain technologies and how these affect energy trading and supply. Students learn about the functioning of energy exchanges as well as the importance of bilateral contracts. In practical exercises, students become acquainted with the different kinds of energy products and explore how to negotiate and draft electricity and gas supply contracts, inter alia. Finally, students are taught about the external energy relations of the EU and their importance for security of supply.

Keywords
Electricity and gas supply contracts (B&B and B&C contracts), drafting of contracts, energy trade, energy exchange, over-the-counter trade, spot and derivative markets, wholesale markets, WTO and Energy Charter Treaty, EU external relations, gas supply relationship EU-Russia, energy policy, energy security, security of supply.

16 December 2021
Details to be announced
Alumni Program

With your degree, you become part of the alumni network. Alumni receive invitations to participate in the further extension of the academic program, and to events held on the campus and within the network.

As the program rolls over, you are cordially invited to participate in the curricular and extracurricular events of the following academic year(s).
